Ms. Renee Purdy
Executive Officer
State Regional Water Quality Board
Los Angeles Region
320 West 4th Street, Suite 200
Los Angeles, CA 90013

Subject: Nursery Growers Association
Los Angeles County Irrigated Lands Group
Conditional Waiver for Irrigated Lands
WATER QUALITY MANAGEMENT PLAN
Version 2.2, # R4-2016-0143

Dear Ms. Purdy:

Pacific Ridgeline prepared this *Water Quality Management Plan, Version 2.2* (WQMP) on behalf of Nursery Growers Association, Los Angeles County Irrigated Lands Group (LAILG). Data was collected in accordance with the Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands (CWIL; Order # R4-2016-0143), under previous versions of the WQMP, the Quality Assurance Project Plan, and the Monitoring and Reporting Plan prepared for this and previous versions of the CWIL.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for knowingly submitting false information, including the possibility of fine and imprisonment.

Respectfully submitted,

Los Angeles Irrigated Lands Group

Ariana Zamora McCray
LAILG, Director of Member Relations

WATER QUALITY MANAGEMENT PLAN
VERSION 2.2

NURSERY GROWERS ASSOCIATION
LOS ANGELES COUNTY IRRIGATED LANDS GROUP

1.0 INTRODUCTION

The NGA is a non-profit association chartered in the late 1950s. The purpose of NGA is to foster and encourage the growth and development of quality nursery stock and to promote all matters that pertain to the best interests of the wholesale nursery growers. NGA developed the LAILG for compliance with the CWIL, which currently consists of Order #R4-2016-0143. PacRL was contracted by NGA to manage the technical aspect of the LAILG.

The LARWQCB is a State of California Agency that regulates water quality within the coastal watershed of Ventura and Los Angeles Counties under the authorities of the Federal Clean Water Act and State Porter Cologne Water Quality Control Act. The area under the jurisdiction of the LARWQCB is known as the Los Angeles Region.

The LAILG has members within the Dominguez Channel LA/Long Beach Harbors WMA, the Los Angeles River Watershed, the San Gabriel River Watershed, the Santa Monica Bay WMA, and the eastern portion of the Santa Clara River Watershed. All five Watersheds and WMAs have impacted waterbodies that appear on the Federal 303(d) list, and listed contaminants include constituents that could be related to agricultural uses.

Water quality impacts associated with agriculture can be primarily traced to discharges resulting from irrigation or stormwater. These discharges may contain pollutants that have been imported or introduced into the irrigation or stormwater; in addition, irrigation practices can mobilize and or concentrate some pollutants. In order to mitigate these potentially polluted discharges from impacting the beneficial uses of water bodies within the Los Angeles Region, the LARWQCB adopted a CWIL (Order No. R4-2005-0080) on November 3, 2005, as mandated by state law and policy.

On October 7, 2010, the LARWQCB adopted a second CWIL for the Los Angeles Region (Order No. R4-2010-0186). Order R4-2010-0186 was extended for six months under Order R4-2015-0202. Order R4-2016-0134, adopted on April 14, 2016, slightly revised the program and extended water quality monitoring throughout the Los Angeles Region for an additional four years.

In each iteration of the CWIL, exceedances are to be dealt with by implementing a WQMP that establishes procedures to reduce or eliminate pollutant loading into receiving waters. Although reported analytical levels of monitoring constituents have trended downward over time, LAILG has reported CWIL exceedances of WQBs throughout the life of the program. This is a continuation of the second main WQMP update for the program, and still maintains the goal to protect and improve water quality group wide.

2.0 BACKGROUND

2.1 Program History

During the first Waiver period, LAILG collected samples from sixteen sampling locations during two sampling events each dry season and two sampling events each wet season. The program existed in this state for the entirety of the 2007 and 2008 monitoring years, and a working WQMP was submitted to the LARWQCB on July 8, 2009. The LAILG placed the program on hold at this time due to financial constraints from growers abandoning the program and a lack of enforcement by the LARWQCB. A discussion of the suspension of the LAILG is included in a letter from the LAILG to the LARWQCB dated August 12, 2009.

LAILG reinstated the program briefly before the new Waiver, and one round of reduced sampling occurred in March of 2011. Following the release of the second Waiver, LAILG prepared a revised MRP and QAPP to address updated requirements. The new MRP presented a reduced sampling schedule in order to offset costs associated with the lack of growers enrolling in the Waiver program.

Water quality monitoring data collected during each Waiver period exceeded applicable Water Quality Benchmarks and necessitated the generation of a WQMP. LAILG prepared a *Water Quality Management Plan, Version 1.1*, dated July 26, 2013, which outlined steps LAILG would take to implement, track, and evaluate additional BMPs throughout the group. Updates to the original plan were submitted on August 21, 2015 and May 10, 2017 that outlined progress towards the original goals of the WQMP goals.

A new WQMP was developed for Order No. R4-2016-0143 and was submitted to the LARWQCB on February 5, 2019. The LARWQCB replied with a comment letter on August 1, 2019, and LAILG submitted a revised *Water Quality Management Plan, Version 2.1* on September 27, 2019. The WQMP Version 2.1 was approved in a letter from the LARWQCB on November 8, 2019. This document is a general update to Version 2.1.

2.2 Current Sampling Program

As of December 2018, the LAILG is comprised of 283 sites and an estimated 1,232 irrigated acres. A regional map showing sampling locations, group boundaries, and all growers currently associated with the LAILG is presented as Figures 1.0-1.5.

LAILG prepared a *Monitoring and Reporting Plan, Version 2.0* on November 1, 2020. The new MRP outlines a random sampling protocol to ensure members in each group are properly represented during sampling activities. During this Waiver period and prior to the submittal of the new MRP, LAILG was operating under the parameters of the MRP and WQMP developed for Order R4-2010-0186, with the goal of gathering enough information to properly apply the WQMP methodology to develop the new MRP for Order R4-2016-0134.

A total of 98 samples have been collected by LAILG from the beginning of the program through to the most recent AMR. The majority of the samples were collected during the first two years of the CWIL, prior to the suspension of the monitoring group. Samples were primarily from storm water runoff during the wet season, and irrigated runoff from the dry season has not been encountered since 2008. A summarized history of collected samples is presented on Table 1.

Table 1. Sampling Timeline

	CWIL Order # R4-2005-0080												Total
	YEAR 1 [1]				YEAR 2 [2]				YEAR 3		YEAR 4		
	Dry Season		Wet Season		Dry Season		Wet Season		Dry Season	Wet Season	Dry Season	Wet Season	
	Event #1	Event #2	Event #1	Event #2	Event #1	Event #2	Event #1	Event #2	Event #1	Event #1	Event #1	Event #1	
Samples Collected	5	3	14	8	2	1	8	11	0	ns*	0	ns*	52
Sites Visited	16	16	16	16	14	14	18	18	18	N/A	18	N/A	164

1 Wet Season sampling events took place over five storms due to localized rain patterns and a general lack of uniform storm intensity and duration.

2 Wet Season sampling events took place during two storm days where all sites were visited.

	CWIL Order # R4-2010-0186																				Total
	Interim Sampling Event [3]	YEAR 1				YEAR 2				YEAR 3				YEAR 4				YEAR 5				
		Dry Season		Wet Season		Dry Season		Wet Season		Dry Season		Wet Season		Dry Season		Wet Season		Dry Season		Wet Season

3 The previous CWIL (Order R4-2005-0080) was replaced on October 7, 2010 with the adoption of a new Waiver (Order R4-2010-0186). As a good faith measure, the LAILG conducted a sampling event during the wet season between the execution of the new CWIL and the required submittal date of an MRP on April 7, 2011.

	CWIL Order # R4-2016-0143														Total
	YEAR 1[4]				YEAR 2[4]				YEAR 3[4]				YEAR 4[4]		
	Dry Season		Wet Season		Dry Season		Wet Season		Dry Season		Wet Season		Dry Season

E. Coli	MPN/100mL	Laboratory
Trash	Observations	Field

[1] Organophosphate Suite: Bolstar, Chlorpyrifos, Demeton, Diazinon, Dichlorvos, Dimethoate, Disulfoton, Ethoprop, Fenchlorophos, Fensulfothion, Fenthion, Malathion, Merphos, Methyl Parathion, Mevinphos, Phorate, Tetrachlorvinphos, Tokuthion, Trichloronate.

[2] Organochlorine Suite: 2.4' - DDD, 2,4' - DDE, 2,4' DDT, 4,4' -DDD, 4,4' -DDE, 4,4' -DDT, Aldrin, BHC-alpha, BHC-beta, BHC-delta, BHC-gamma, Chlordane-alpha, Chlordane-gamma, Dieldrin, Endosulfan sufate, Endosulfan-I, Endosulfan-II, Endrin, Endrin Aldehyde, Endrin Ketone.

[3] Chronic Toxic Unit is the reciprocal of the sample concentration that caused no observable effect on the test organism by the end of a chronic toxicity test.

mg/l	milligrams per liter
ng/L	nanograms per liter
°F	degrees Fahrenheit
TUc	chronic toxic unit
NTU	nephalitic turbidity units

2.3 Current Events

Results from group wide sampling are reported to the LARWQCB on a yearly basis. As reported in previous AMRs, a number of water quality benchmarks established by the CWIL and other regulatory programs (i.e. Aquatic Life Benchmarks) have been exceeded during the program at multiple sampling locations, which mandated the development of a WQMP.

In order to increase the overall response rate throughout the group, the LAILG has sorted growers into various levels of compliance for reporting to the LARWQCB. The grower list was broken into the following categories: Enrolled, Not Enrolled, and Notice of Termination Received. Growers that have been responsive to the LAILG and have completed at least some aspects of the WQMP and recently paid dues will be considered Enrolled; growers that have been non-responsive or have quit paying dues in a timely manner will be notified of their removal from the group and placed on the Not Enrolled list; growers that have been contacted by the LAILG about group requirements but have never joined the group or have not responded and not initiated compliance with the Waiver as an individual discharger will be listed on the Not Enrolled list; and grower facilities that have been closed for various reasons are listed as Notice of Termination Received. Included in the Enrolled list is the status of specific group requirements for each grower, including recent group dues, paperwork, and education requirements.

Included is a list of members who are currently not in good status with LAILG and are labelled as Not-Enrolled. LAILG is currently waiting on the LARWQCB to issue Notice of Violation letters to assist with the re-enrollment of members who have lapsed. The LAILG is providing this information to the LARWQCB so that they may assist with outreach and potential regulatory actions to non-responsive growers in order to make the WQMP a viable document. The current grower list and status within the group is included in Appendix A.

Current member statuses for the submittal of the requested questionnaires, completion of the required education, and payment of membership dues are included on both the Enrolled and Not Enrolled lists included in Appendix A. Also included in Appendix A is a list of members who have submitted a Notice of Termination for removal from the waiver.

3.0 OPERATIONAL GROUPING

3.1 General Methodology

LAILG uses grower information to evaluate the potential impact of facilities based on their operational practices, including how much material (fertilizer, pesticides, irrigation water, etc.) members used on a per acre basis. The general hypothesis of the LAILG is that larger operations, based on sales, total company size, and shipping patterns, will show more intense fertilizer and pesticide use patterns, corresponding to an increased risk of contaminants leaving the property.

In order to determine these operational practices, LAILG has submitted a General Questionnaire to each grower. The questionnaire requested the following information: gross sales for an operator, company-wide; crop type; total irrigated acreage operated by company, including acreage both inside and outside LA County; shipping patterns; total fertilizer use and formulation, per parcel per year; total pesticide/herbicide/fungicide applications, per parcel per year; irrigation use per year; fertilizer application practices; and, irrigation practices. A copy of the general information questionnaire is included in Appendix B.

Utilizing the information gathered in the General Questionnaire, LAILG applies the matrix in Table 3 to sort all growers into the following groups: large operation, medium operation, small operation, and micro operation. A separate vineyard category may be added in the future.

Table 3. Grouping Scores

	Total Operating Acres (irrigated)		Gross Revenue		Shipping Reach
0	< 5 Acres	0	≤ $50k		(cumulative)
2	5 ≤ Acres < 10	2	$50k < $ ≤ $200k	1	Intra company
4	10 ≤ Acres < 25	4	$200k < $ ≤ $1M	1	Northern California
6	25 ≤ Acres < 100	6	$1M < $ ≤ $5M	1	Interstate
8	Acres ≥ 100	8	$ > 5M		

Growers that scored 11 to 19 are considered large operations, growers that scored 6 to 10 are considered medium operations, growers that scored 1 to 5 are considered small operations, and growers that scored 0 are considered a micro operation.

3.2 Grouping Results

At this time, a total of 153 out of the 208 individual growers (73.6%) and 208 of the 283 facilities (73.5%), which represent 1,017 of the 1,232 acres (82.5%) enrolled in the program have answered the General Questionnaire and were able to be grouped for this report. The current grouping status for members that have submitted sufficient data is summarized in Table 4, and the raw data is included in Appendix C. Information related to gross revenue and shipping reach are kept secret for privacy. The current status of all members of the group, including gaps in current information, is presented on the growers list in Appendix A.

Table 4. Summary of Grouping Results

Each group has a random sampling location chosen each sampling event to represent all members in that group. The grouping and associated sampling methodology are outlined in the most recent MRP for the LAILG.

4.0 SUMMARY OF EXISTING CONDITIONS

The following is an update of findings originally presented in the *Water Quality Management Plan*, *Version 1.1*, dated July 26, 2013. For detailed discussions, please refer to the original WQMP.

4.1 Summary of Water Quality

4.1.1 Water Quality Benchmarks

The following tables present water quality benchmarks that apply to this program for the sites that are currently being sampled. They are derived from language included in the Waiver, along with the Water Quality Control Plan Los Angeles Region (Basin Plan) objectives, California Toxics Rule benchmarks, USEPA ALB guidelines, and CCR Title 22 maximum contamination levels for municipal water (organic chemicals).

Table 5. Water Quality Benchmarks, General Chemistry

Watershed/stream reach	NGA Site #	Ammonia	TDS	Sulfate	Chloride	Nitrogen	TSS	Copper (µg/L)	Phosphate
Los Angeles River:									
Above Figueroa St.	19, 184	a)	950	300	150	8	—	$CCC=0.960e^{[(0.8545(\ln(\text{hardness})))+(-1.702)]}$	—

Limits Reported in ug/L

-- No benchmarks have been set

[8] Because the underlying toxicity value is a "greater-than" value (such as >265,000), this benchmark may overestimate toxicity.

[9] The chronic benchmark is based on the acute toxicity value (which was lower than the lowest available chronic toxicity value), and therefore may underestimate chronic toxicity.

[10] Although the underlying acute toxicity value is greater than or equal to the chronic toxicity value, the acute benchmark is lower than the chronic benchmark because acute and chronic toxicity values were multiplied by LOC values of 0.5 and 1, respectively.

[13] Because the underlying toxicity value is a "less-than" value (such as <1,500), this benchmark may underestimate toxicity.

[16] Toxicity values and benchmarks apply to permethrin. If monitoring data represent only the *cis* isomer of permethrin in water, comparison with benchmarks may underestimate potential toxicity.

Table 9. Water Quality Benchmarks, Field Monitoring and Toxicity

Constituent	Narrative Objective	Applicable Benchmarks
pH	The pH of inland surface water shall not be depressed below 6.5 or raised above 8.5 as a result of waste discharges. Ambient pH levels shall not be changed by more than 0.5 pH units from natural conditions as a result of waste discharges.	6.5 ≤ pH ≤ 8.5 Changes to ambient receiving water conditions are not assessed; "ambient" or "natural" conditions have not been established
Temperature	For water designated WARM, water temperature shall not be altered by more than 5°F above natural temperature. At no time shall WARM-designated waters be raised above 80°F as a result of water discharge	WARM: ≤ 80°F Changes to ambient receiving water conditions are not assessed; "ambient" or "natural" conditions have not been established
	For waters designated as COLD, water temperature shall not be altered by more than 5°F above the natural temperature.	COLD: No numeric benchmark. Changes to ambient receiving water conditions are not assessed; "ambient" or "natural" conditions have not been established.
Dissolved Oxygen	No single dissolved oxygen determination shall be less than 5 mg/L, except when natural conditions cause lesser concentrations.	≥ 5 mg/L
	The dissolved oxygen content of all surface waters designated as WARM shall not be depressed below 5 mg/L as a result of waste discharge.	WARM: ≥ 5 mg/L
	The dissolved oxygen content of all surface waters designated as COLD and SPWN shall not be depressed below 7 mg/L as a result of waste discharge.	COLD, SPWN: ≥ 7 mg/L
Turbidity	Waters shall be free of changes in turbidity that cause nuisance or adversely affect beneficial uses. Increases in natural turbidity attribute to controllable water quality factors shall not exceed the following limits: Where natural turbidity is between 0 and 50 NTU, increases shall not exceed 20%. Where natural turbidity is greater than 50 NTU, increases shall not exceed 10%.	No Numeric benchmarks. Changes to ambient receiving water conditions are not assessed; "ambient" or "natural" conditions have not been established.
Toxicity	All waters shall be free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal or aquatic life. There shall be no chronic toxicity in ambient waters outside mixing zones.	≤ 1.0 TUc[3]
Biostimulator Substances	Waters shall not contain biostimulator substances in concentrations that promote aquatic growth to the extent that such growth causes nuisance or adversely affect beneficial uses.	No Numeric benchmarks. Nutrients listed on Table X.
Total Suspended Solids (TSS)	Wastes shall not contain suspended material in concentrations that cause nuisance or adversely affect beneficial uses.	No numeric benchmarks.

4.1.2 Summary of Water Quality Benchmark Exceedances

Although reported analytical levels of monitoring constituents have trended downward over time, LAILG has exceeded water quality benchmarks, as established in Section 3.1.1, throughout the life of the program. For the purpose of analysis, benchmarks are broken into four (4) general groups: general chemistry (including nutrients), pesticides, toxicity, and field monitoring. The following tables and paragraphs summarize exceedances up until the most recent Annual Monitoring Report, dated December 15, 2019.

ni Not included in laboratory analytical suite during this Waiver period

-- No samples collected

Toxicity

A total of 16 TIEs have been conducted throughout the life of the program. Seven of the TIEs did not show a significant observed toxicity effect in follow up testing. TIE results indicated a variety of reasons for toxicity, including non-polar organic compounds, particulate-bound toxicants, volatile compounds, organophosphates, particulate bound toxicants, metals, and a combination of the previously listed toxicants. To date, results from TIE testing have not provided significant evidence of a prevailing issue across sites, and does not appear to correlate strongly with laboratory analytical results.

Field Monitoring Results

Field monitoring readings have not exceeded Basin Plan objectives.

4.2 Graphical Representations of Water Quality Trends, Group Data

The following section presents general trends over time for samples collected throughout the program. All constituents that have ever exceeded a benchmark level set by the CWIL and constituents that are generally indicative of water quality are included. Constituents that have exceeded guideline benchmarks set by the LAILG but are not specifically included in the CWIL as Standard Water Quality Benchmarks are only included if they have exceeded levels in over approximately 10 percent of the total samples collected. The raw data used to generate the graphs is included in the most recent AMR, dated January 31, 2019.

General Chemistry

All general chemistry constituents presented on the graphs have shown a downward trend over the life of the program, with the exception of TSS, which has been relatively flat and is highly dependent on the intensity of the storm during sampling. TSS is not currently regulated by the CWIL. Graphs were added for both wet and dry season sampling, however, no dry season samples have been collected since August of 2008. Trendlines are linear and were generated by Microsoft Excel based on all historical data.

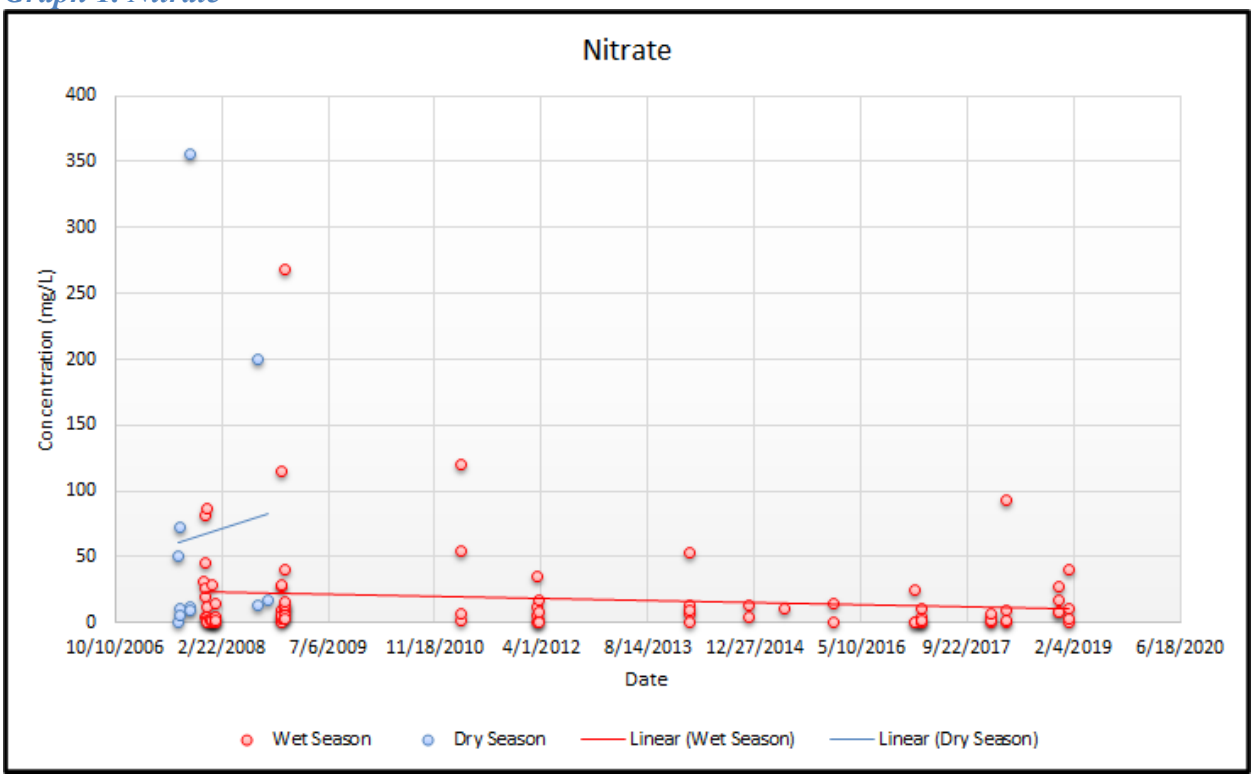
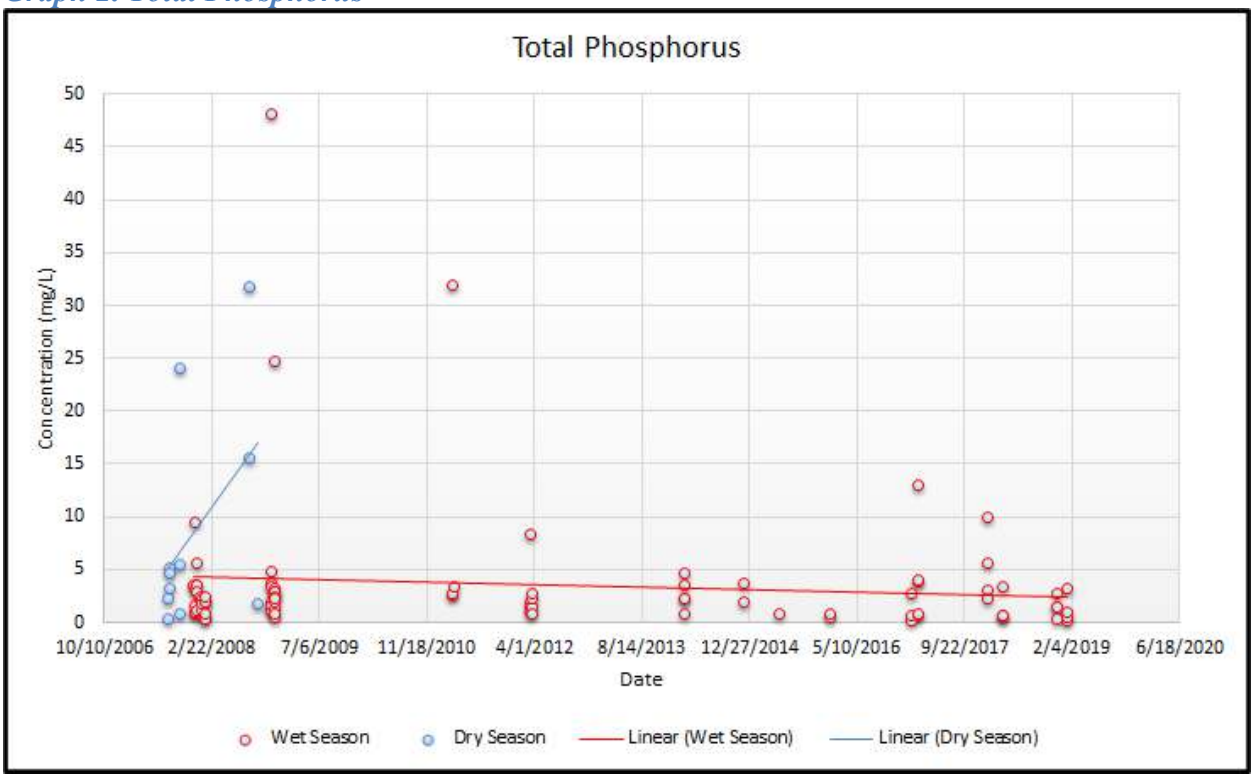
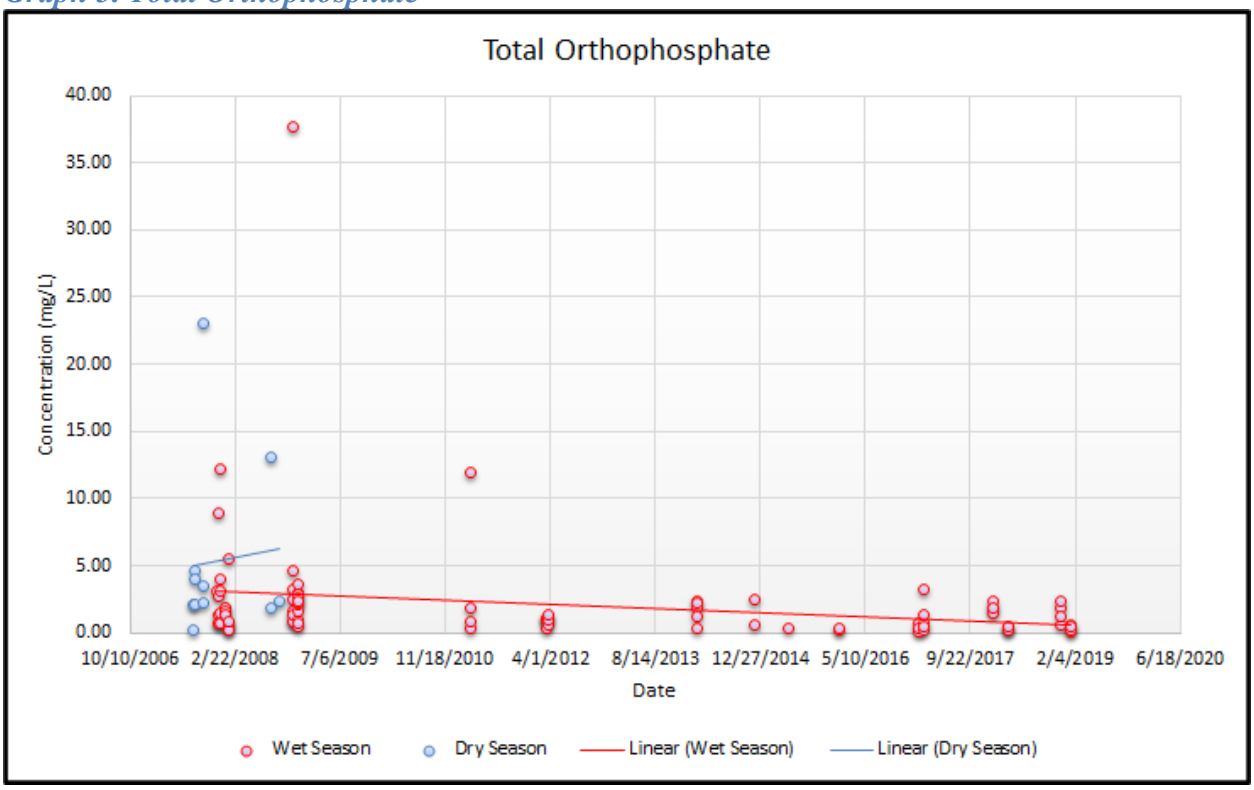


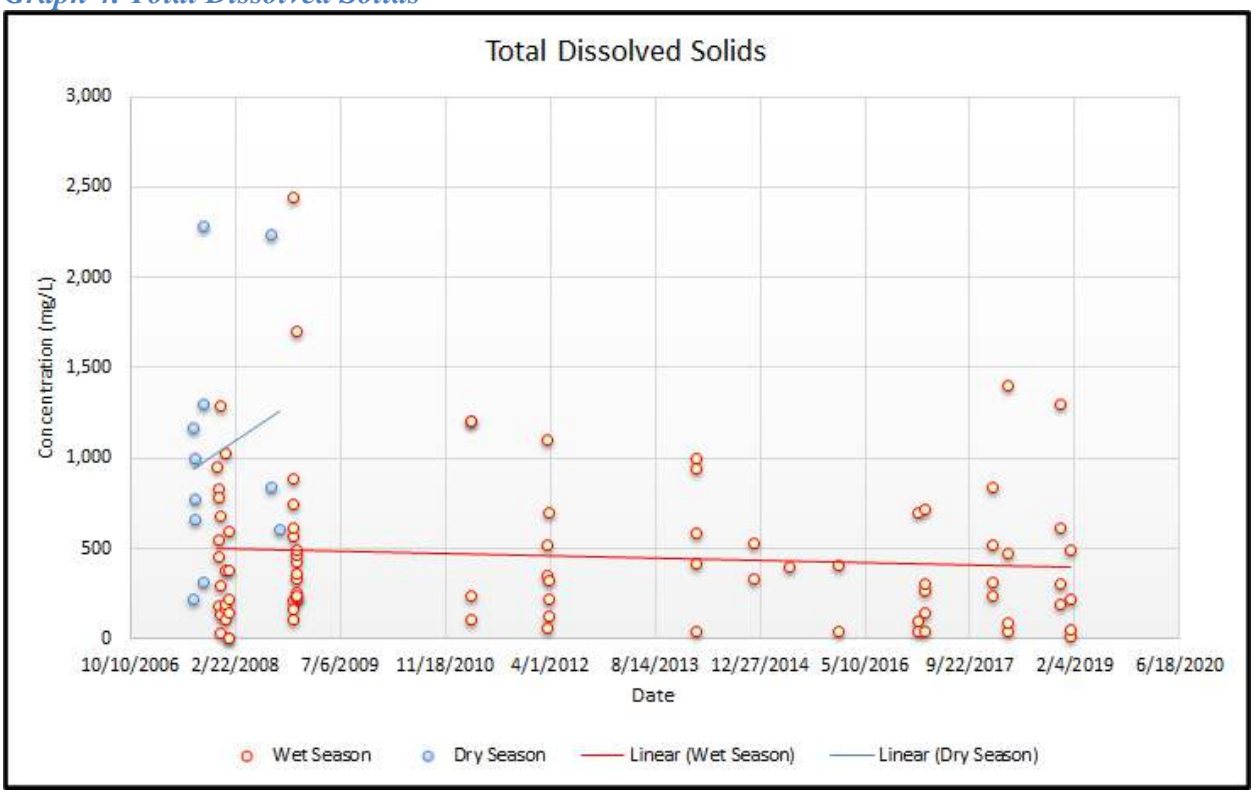
Graph 2. Total Phosphorus



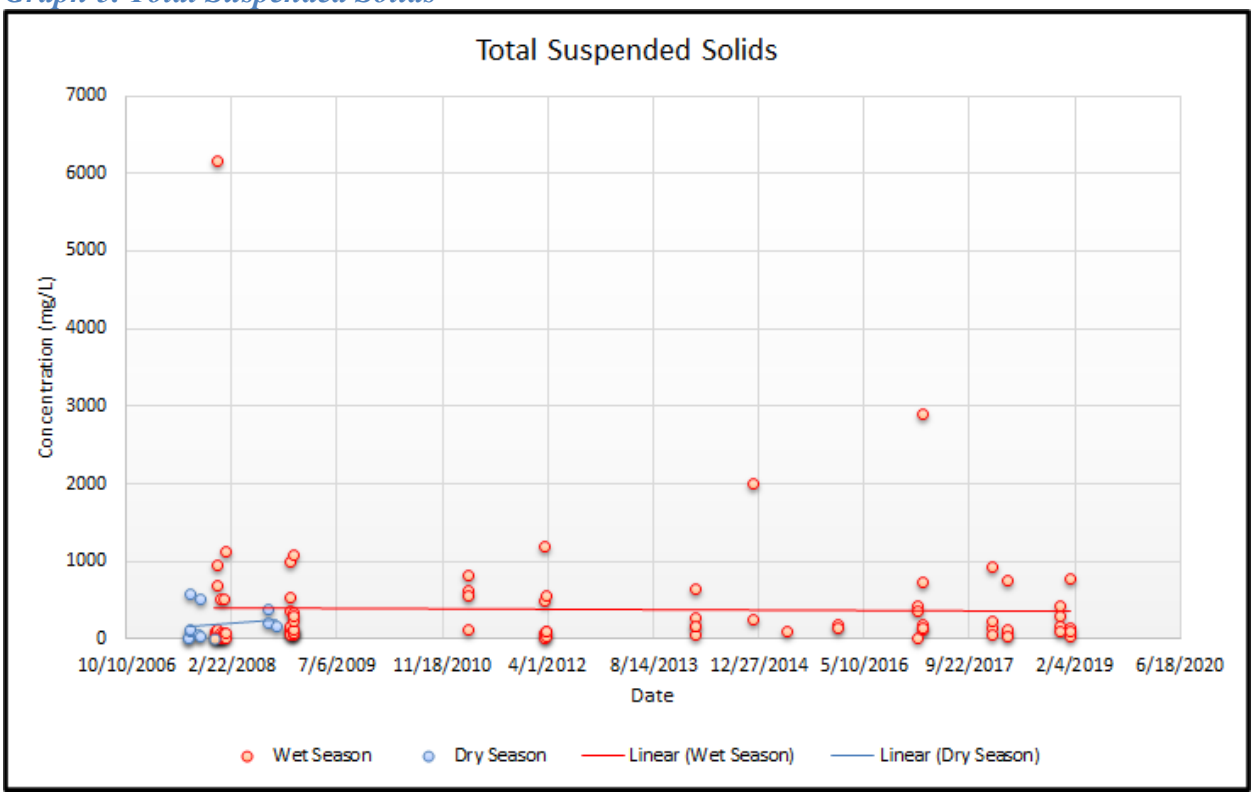
Graph 3. Total Orthophosphate



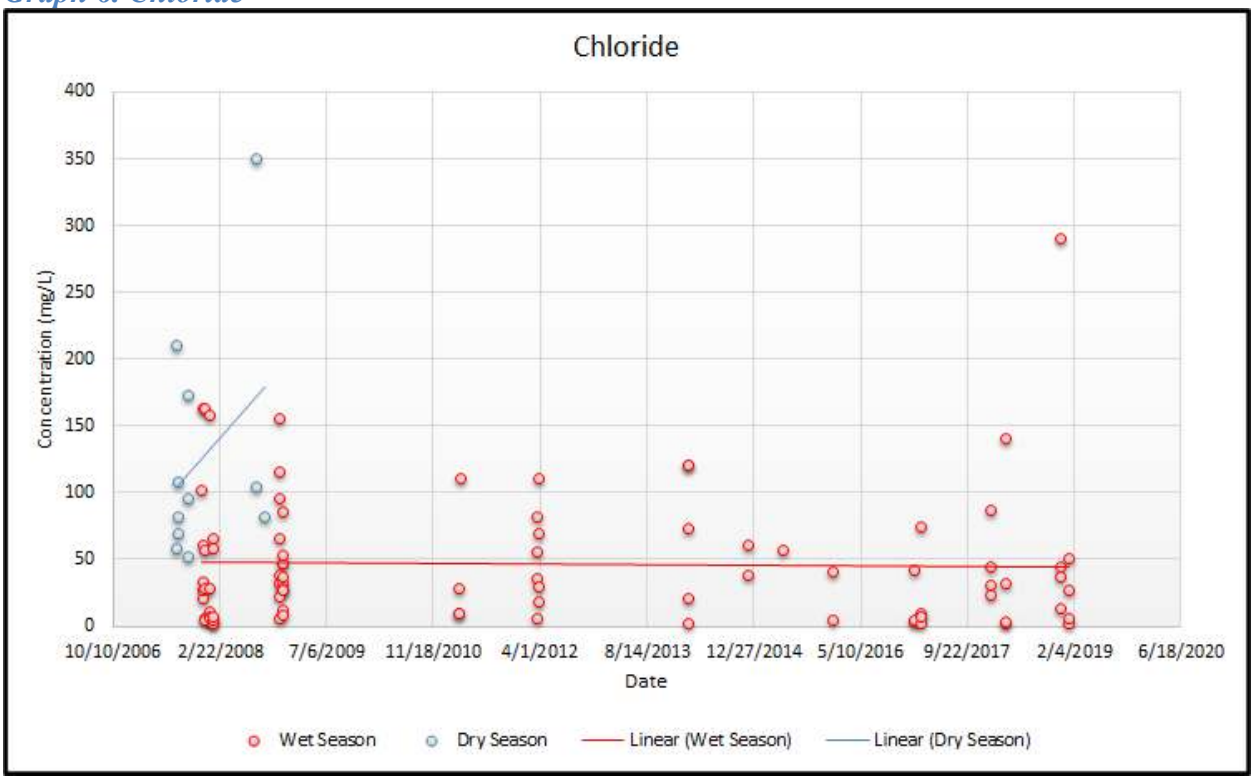
Graph 4. Total Dissolved Solids



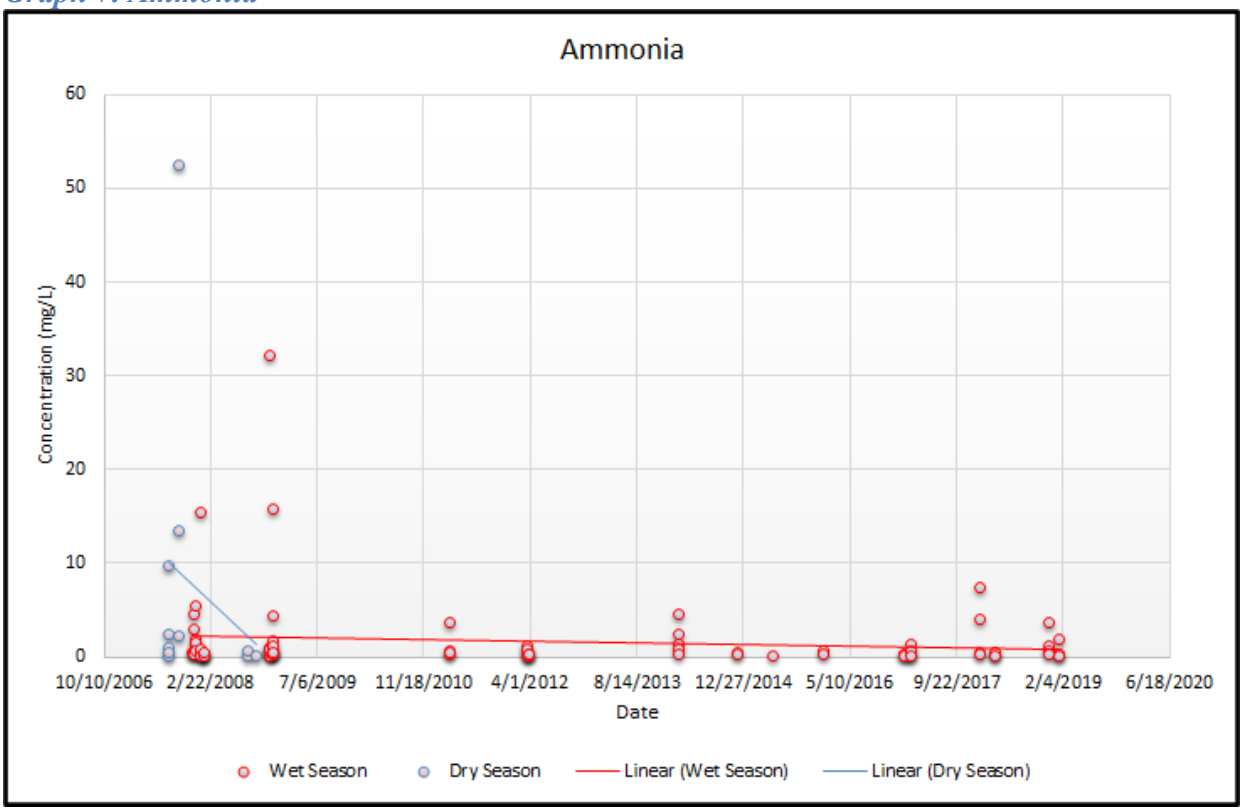
Graph 5. Total Suspended Solids



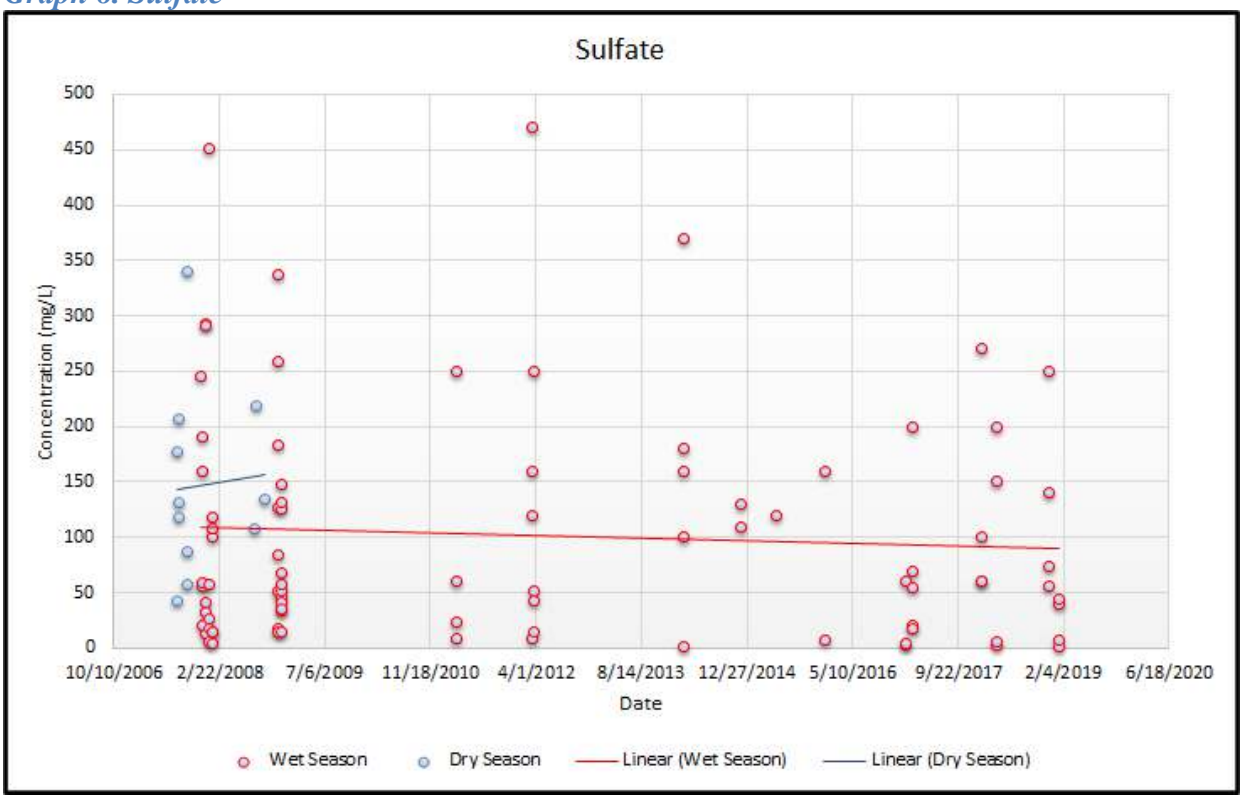
Graph 6. Chloride



Graph 7. Ammonia



Graph 8. Sulfate



OC Pesticides

All OC Pesticides (Legacy Pesticides) presented on the graphs have shown a downward trend for both individual constituents and the sum of all detected constituents in each sample over the life of the program. Graphs were added for both wet and dry season sampling, however, no dry season samples have been collected since August of 2008. Trendlines are linear and were generated by Microsoft Excel based on all historical data.

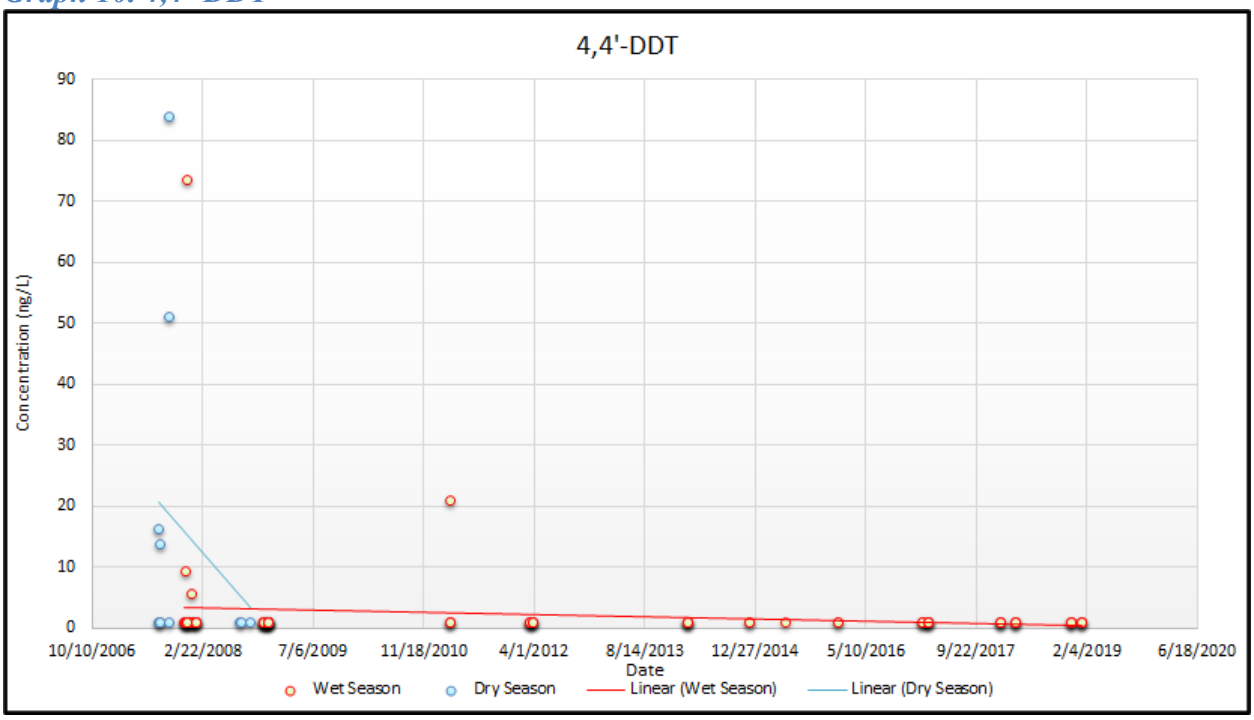
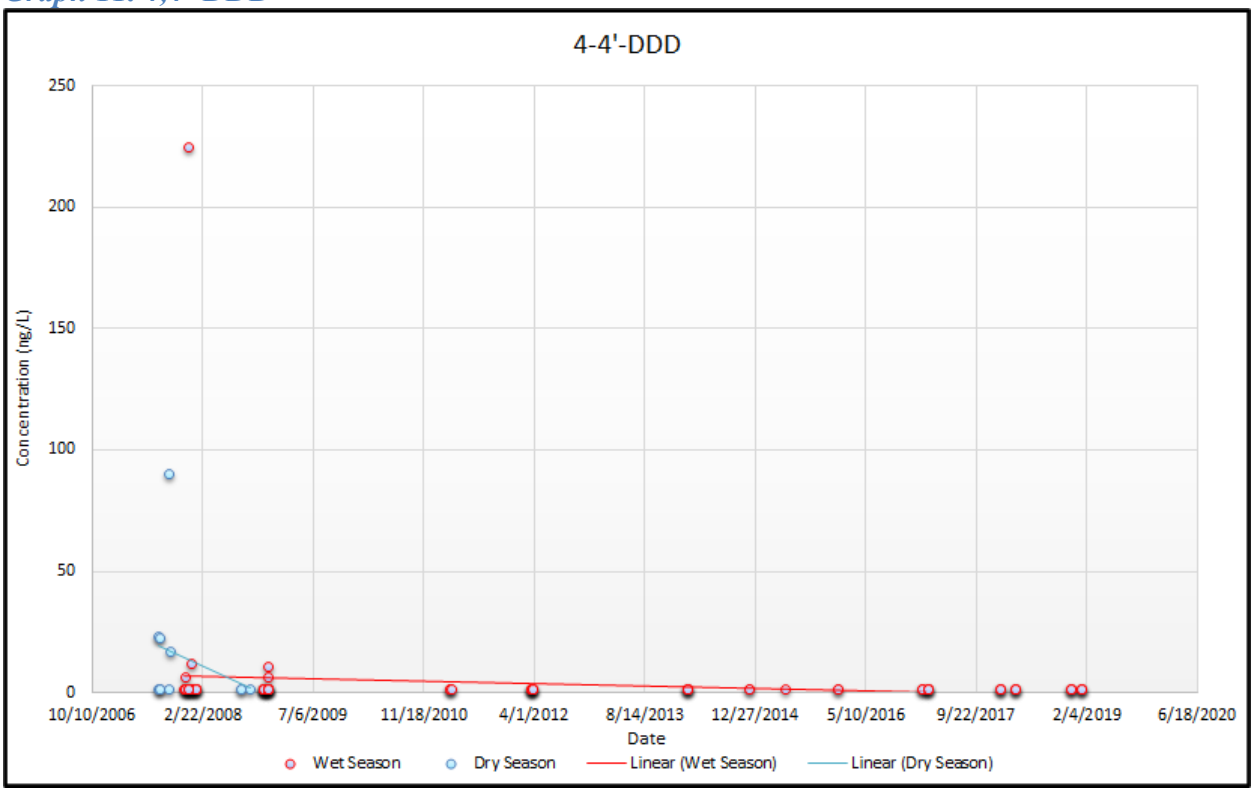
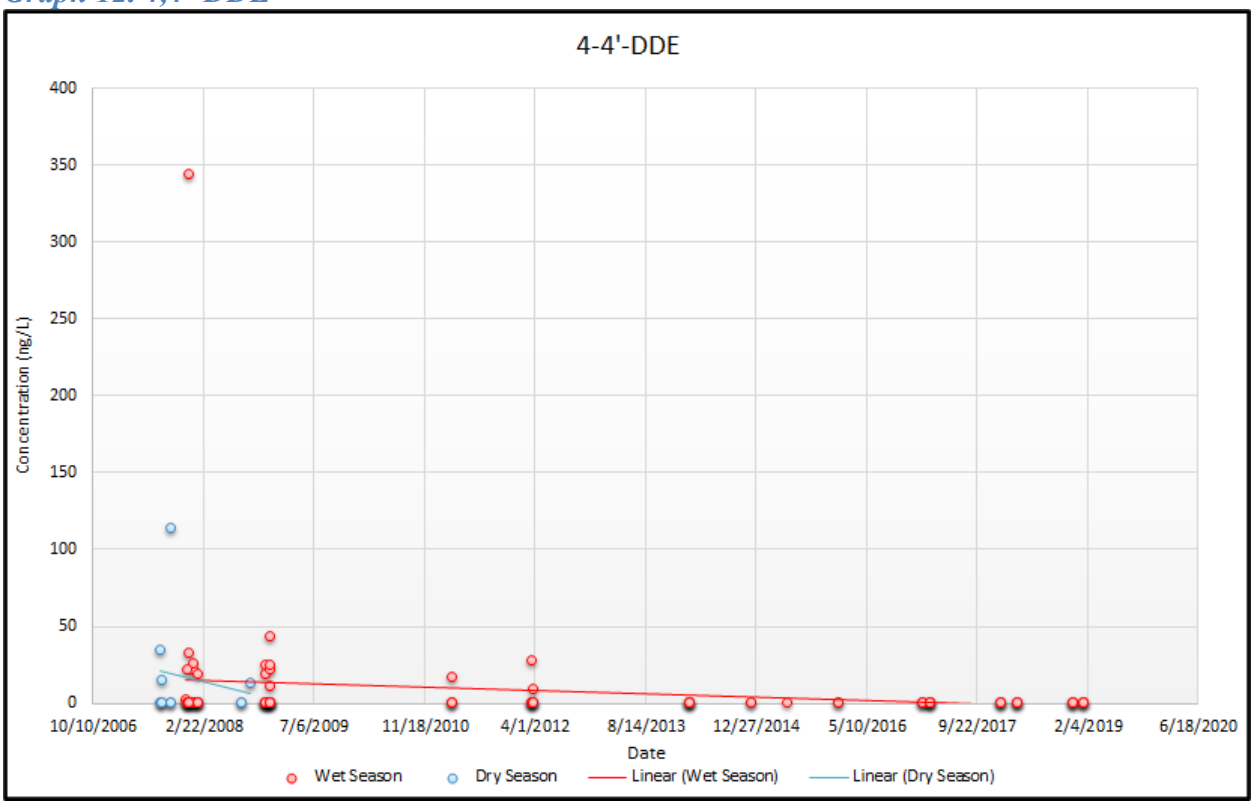


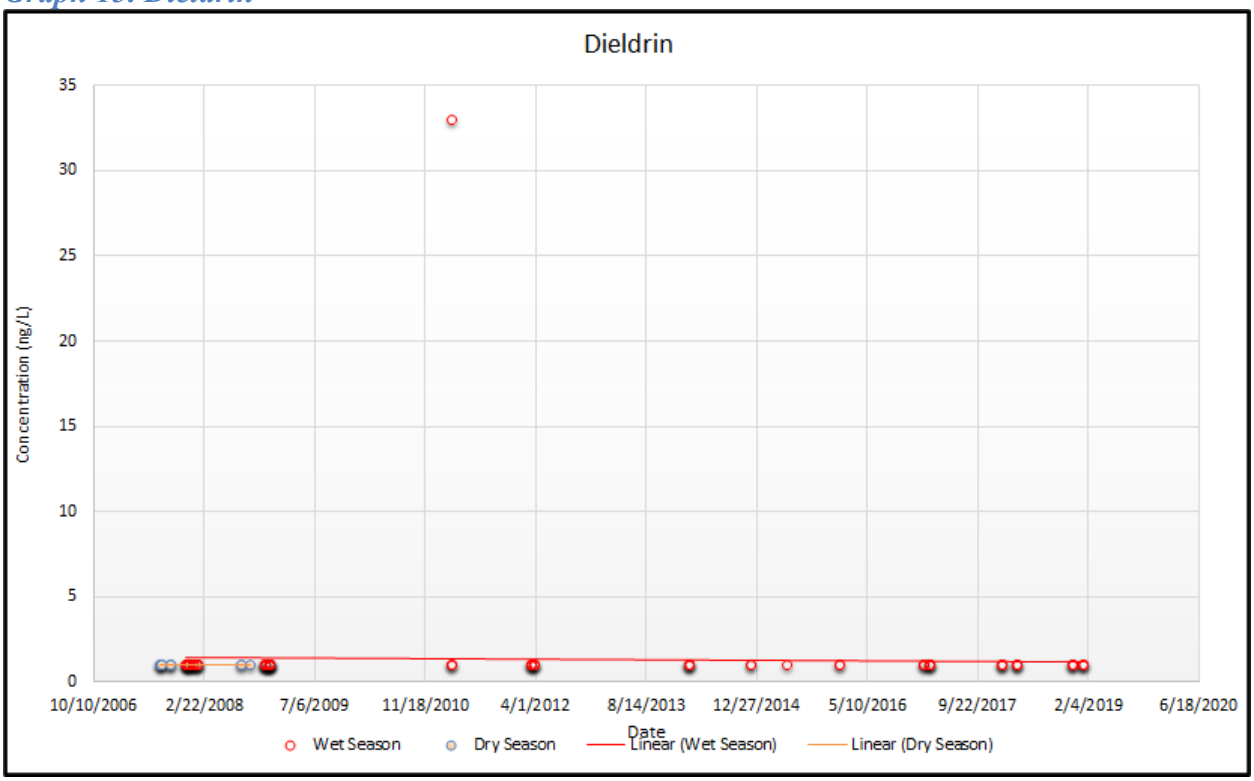
Graph 11. 4,4'-DDD



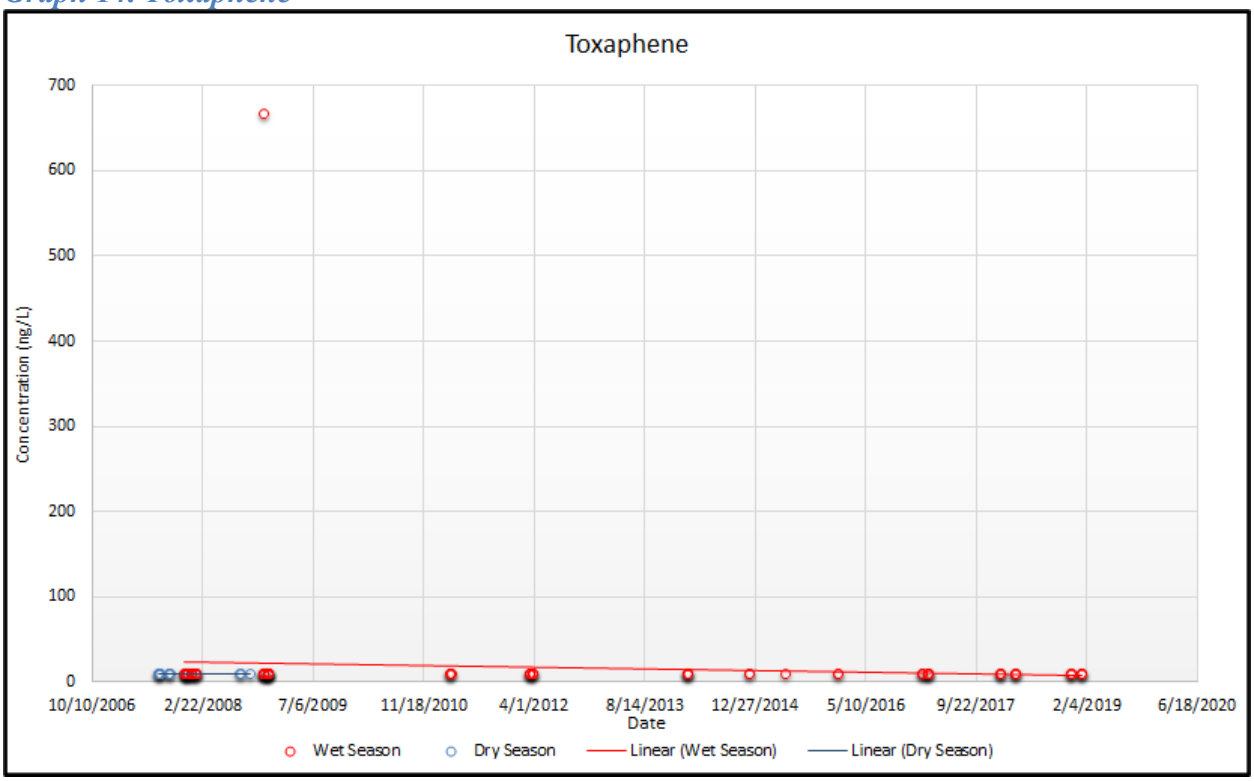
Graph 12. 4,4'-DDE



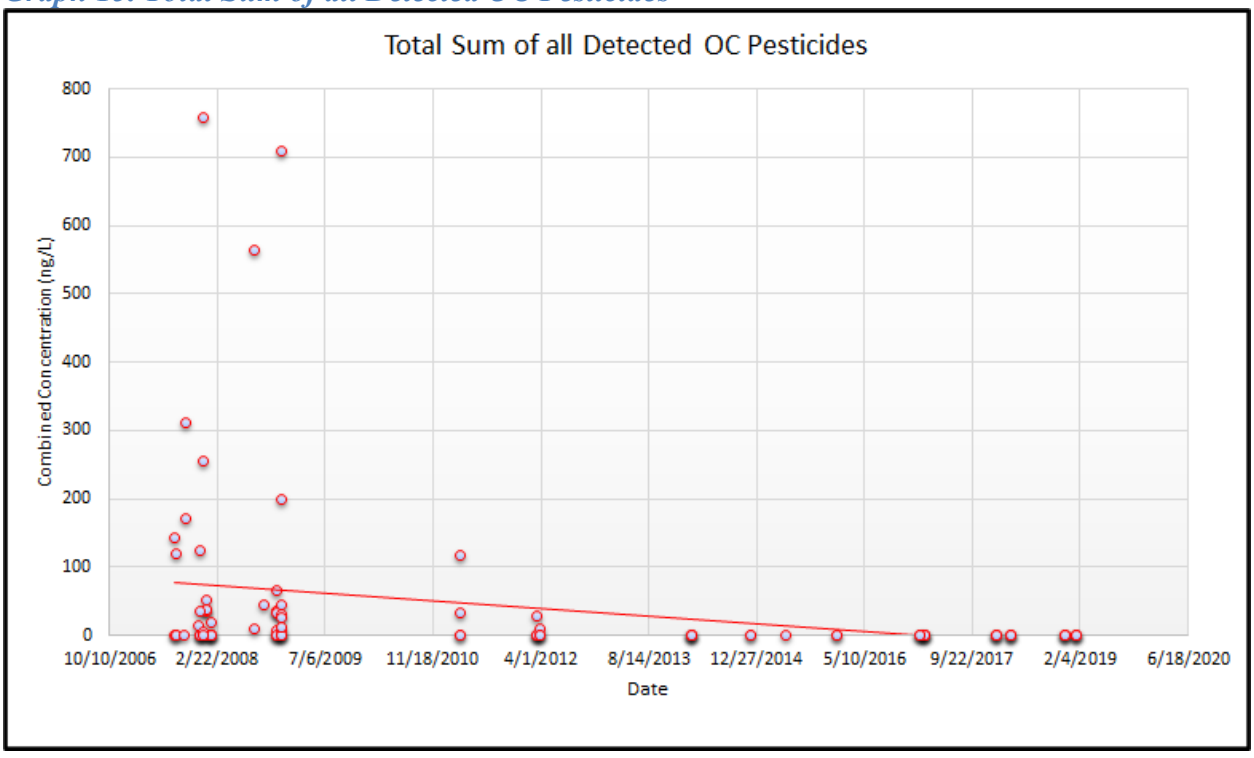
Graph 13. Dieldrin



Graph 14. Toxaphene



Graph 15. Total Sum of all Detected OC Pesticides



OP Pesticides

OP Pesticides are presented individually on graphs below. Note that there were extreme outlier concentrations detected at a single sampling site that skewed the trend lines for the entire group. OP pesticides were not detected widely throughout the group. Graphs were added for both wet and dry season sampling, however, no dry season samples have been collected since August of 2008. The sum of all detected OP Pesticide constituents in each sample have shown a downward trend over the life of the program, and are presented below. Trendlines are linear and were generated by Microsoft Excel based on all historical data.

Pyrethroid Pesticides

All Pyrethroid Pesticides presented on the graphs have shown a downward trend in wet season sampling events for both individual constituents and the sum of all detected constituents in each sample over the life of the program. Graphs were added for both wet and dry season sampling, however, no dry season samples have been collected since August of 2008. Trendlines are linear and were generated by Microsoft Excel based on all historical data.

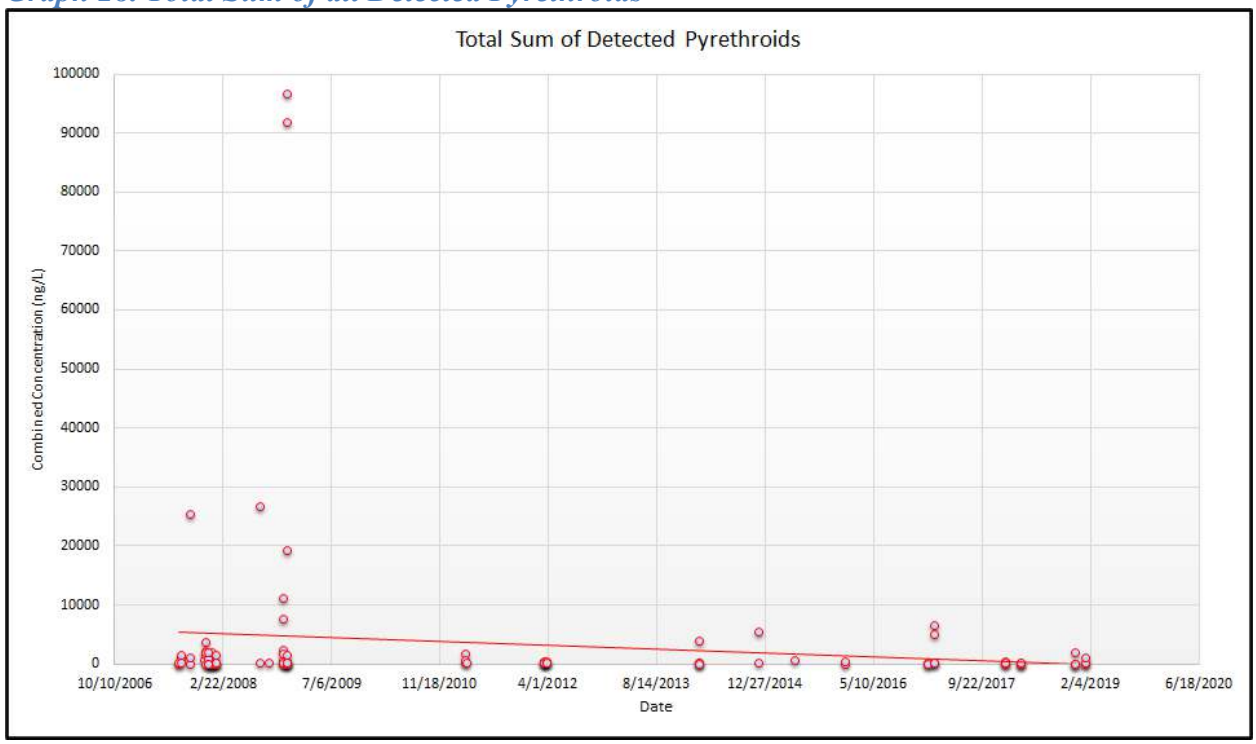
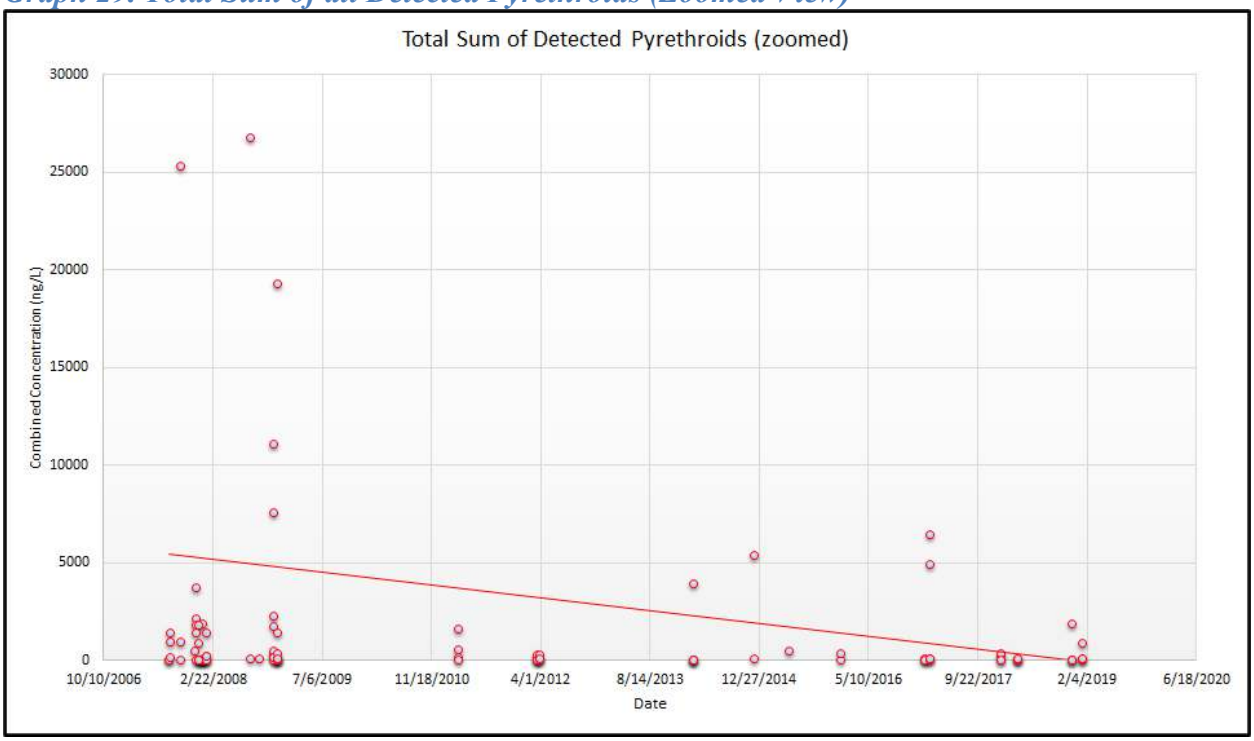


Graph 29. Total Sum of all Detected Pyrethroids (Zoomed View)



4.3 Graphical Representations of Water Quality Trends, Individual Sites

The following section presents general trends over time at individual sampling sites for samples collected during the wet season sampling portion of the program. Only active sampling locations that have three or more historical samples collected and are currently enrolled in the group are included. Dry season samples are not included since no sampling site has had dry season runoff more than two times during the life of the program, which is not sufficient for any sort of trend analysis. Also, dry season samples have not been collected since September of 2008, which is a positive Water Quality Trend.

All constituents that have ever exceeded a benchmark level set by the CWIL at the sampling site and constituents that are generally indicative of water quality are included. Generally speaking, the majority of sites have shown a downward trend in constituents that have set Water Quality Benchmarks. This is especially true of sites that have been sampled since the beginning of the program and where there is sufficient collected data. The raw data used to generate the graphs is included in the most recent AMR, dated December 15, 2019.

4.4 Water Quality Data in Relation to BMPs

LAILG submitted a BMP Questionnaire to all enrolled members along with the General Questionnaire at the beginning of the current Waiver period. The BMP Questionnaire was developed to track general use of current BMPs at sites, the types of growers that are implementing specific BMPs, and to track the future implementation of BMPs throughout the group. Historically this level of detail on existing and planned BMPs was not available to the LAILG, and was not specifically required by previous Waivers.

Although individual sites and the group as a whole has generally shown improving water quality throughout the program, there is insufficient data to determine what historical BMPs were implemented and at what time they were implemented to determine which BMPs most improved water quality throughout the group. BMP data collected from this point forward will be used to set a baseline of BMP implementation at sites, and future sampling results will be compared to newly implemented or improved BMPs at sampling locations where feasible. Existing BMPs throughout the group are discussed in Section 5.2.

5.0 ANALYSIS OF EXISTING CONDITIONS

5.1 Pesticide, Fertilizer, and Water Use

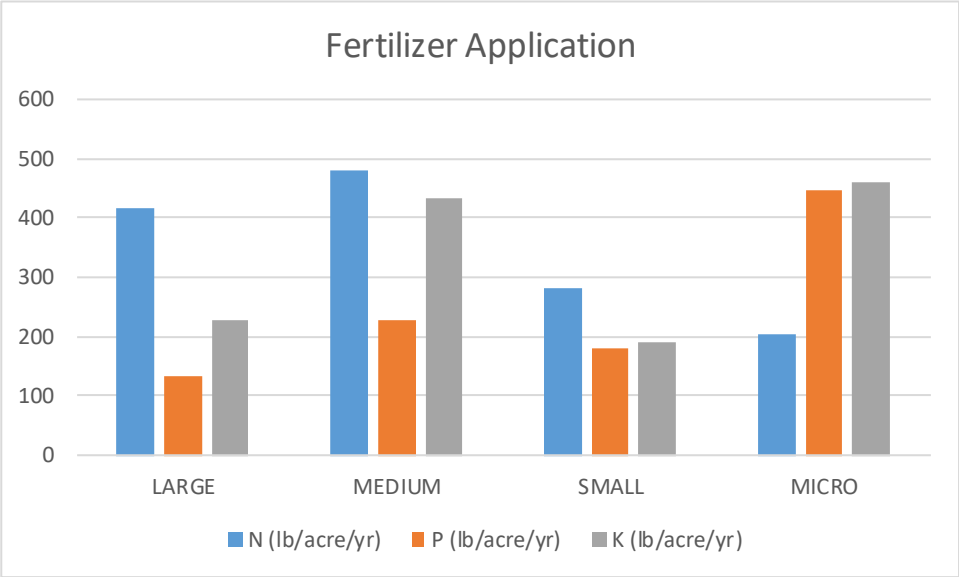
In addition to using the General Questionnaire for sorting growers into operational groups, collected information was used to assess nutrient, pesticide, and water use patterns throughout the group. This information was used to direct members towards BMPs that are representative of their most intensive use patterns, with the assumption that this will be most beneficial to protecting water quality at their operations.

Collected data was organized, tabulated, and a median and average of values group wide was calculated for pounds of fertilizer used per acre, pesticide application frequency per year and number of pesticides used, and water use per acre per year. Members who reported values that were extreme outliers were removed and will be evaluated further for self-reporting errors before inclusion into any statistical analysis. The median and average values for fertilizer (Nitrogen) were 91 and 347 pounds per acre per year, respectively. The median and average values for pesticide use were 5 and 27 applications per year, respectively. The median and average values for water use were 531,941 and 722,893 gallons per acre per year, respectively.

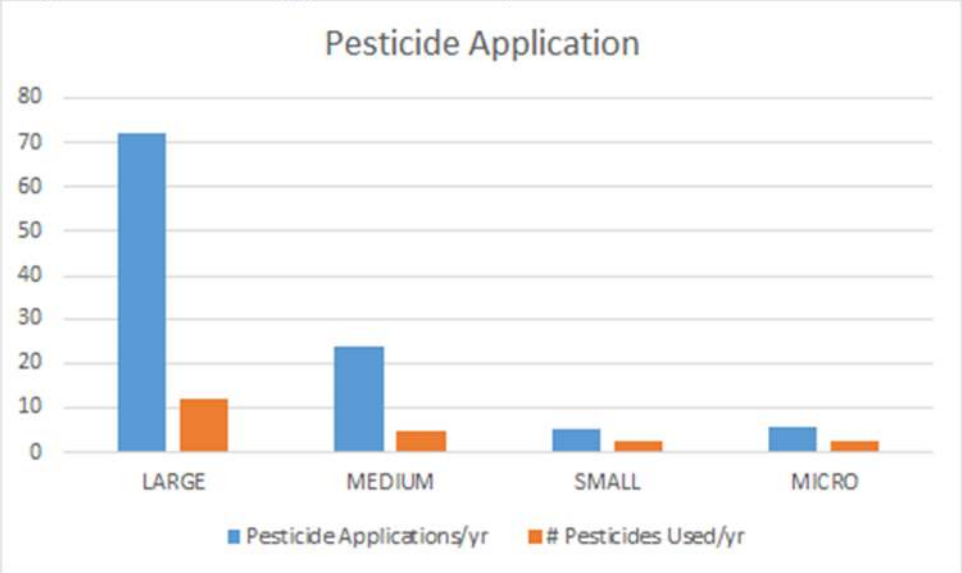
Members were then grouped into Low, Average, and High use groups for fertilizer use, pesticide use, and water use, based on their relation to the rest of the growers. Additional weight was given to Nitrogen use in the fertilizer category and pesticide application frequency in the pesticide category. The Low use designation was used for members below the median value, the Average use designation was used for members between the median and average values, and the High use designation was used for members above the average values. Results from designations are included on a member by member basis in Appendix D.

Collected data was also evaluated based on the assigned grouping for members to determine general patterns throughout the group. Grouping patterns are presented for fertilizer use, pesticide use, and water use are presented on Graphs 21 through 23.

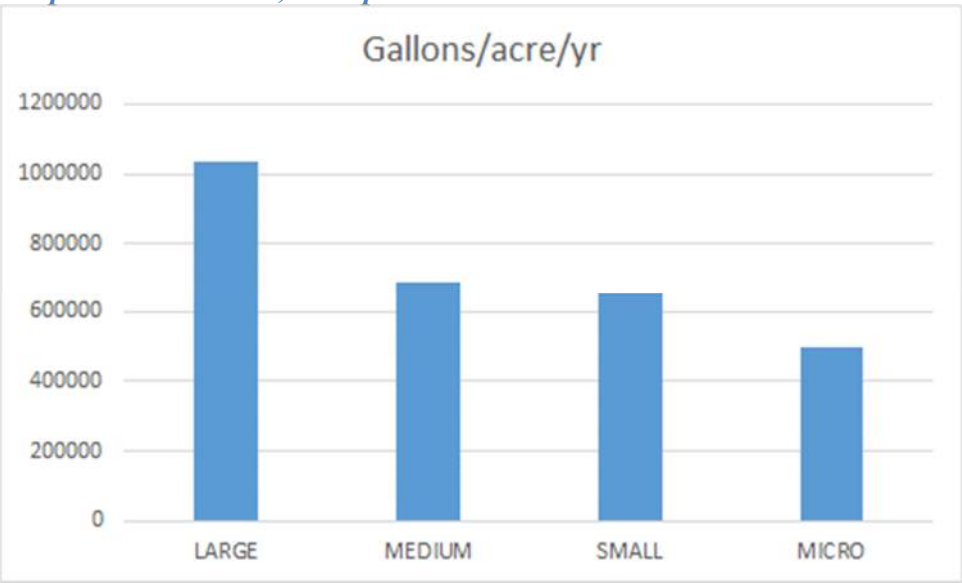
Graph 49. Fertilizer Application, Groups



Graph 50. Pesticide Application, Groups



Graph 51. Water Use, Groups



Generally speaking, the average pesticide use and watering intensity is highest in the Large growers grouping and decreases through the group sizing to the Micro grower grouping. Nutrient use is similar between the Large and Medium groupings and decreases in the Small and Micro groups.

5.2 Baseline BMP Implementation – Total LAILG

BMP practices proposed on the BMP Questionnaire were broken into five general categories, in descending order of significance: erosion and runoff management, nutrient management, pest management, irrigation management, and non-production area management (housekeeping). LAILG uses this BMP implementation data, including BMP types, adoption rates, and degrees of implementation, to suggest future BMP to implement throughout the group. Future monitoring data will be compared to self-reported BMP data in order to assess BMP effectiveness and determine if additional monitoring practices are necessary to meet Water Quality Benchmarks.

A copy of the BMP Questionnaire is included in Appendix E, and the raw data on a site by site basis is included in Appendix F. This is the same data that was reported in the *Water Quality Management Plan, Version 2.1*. A new tally will be completed upon the beginning of the next waiver period to set the new baseline status for the group. A total of 188 members completed all five of the original BMP Questionnaires. Tables 12 through 16 present a summary of all BMP Questionnaire data on a group wide basis from the previous WQMP.

5.3 Baseline BMP Implementation – Current Groups

A copy of the BMP Questionnaire is included in Appendix E, and the raw data on a site by site basis is included in Appendix F. Tables 17 through 21 present a summary of all BMP Questionnaire data that has been broken into individual groups that previous reported data for the last WQMP. The tables present BMP data in the five categories presented in the BMP Questionnaire: Erosion and Sediment Management, Nutrient Management, Pest Management, Irrigation Management, and Non-Production Area Management (Housekeeping). Each individual table is broken into four smaller tables according to the different operational groups: Large, Medium, Small, and Micro. Please note that some members have multiple facilities and have answered BMP questionnaires for each location. This accounts for the difference in responses between the General Information Questionnaire and the BMP Questionnaire.

6.0 PROPOSED ADDITIONAL OR UPGRADED BMPS

There is currently not enough representative sampling data to evaluate sampling results from each individual group, with or without comparison to existing BMP patterns. Extrapolating all samples collected to date to the current operational grouping, 61 samples have been collected from the Large group, 27 samples have been collected from the Medium group, 8 samples have been collected from the Small group, and no samples have been collected from the Micro group. Two samples were collected from locations that have insufficient information to try and historically place them in the current grouping. Samples have been highly concentrated at only a few locations, with 55 of the 98 samples collected during the life of the program coming from discharges at just six facilities.

A new MRP has been developed that is more representative of each individual sampling group and spreads sampling locations throughout all potential members through a randomized sampling protocol. The ultimate goal of the MRP is to generate sampling results that can be correlated with the self-reported data for BMPs and fertilizer, pesticide, and water use patterns in each group and throughout the LAILG as a whole.

Once baseline conditions are established, additional BMPs will be implemented, as required and necessary. The following represents the general format that additional BMPs will be implemented in future reiterations of the WQMP. In the meantime, efforts will be focused on collecting information from members that are currently out of compliance, with an emphasis on data necessary to place members in the proper group. The minimum BMP requirements included as Appendix G will continue to be enforced group-wide.

The future choice of additional or upgraded BMPs will be based on comparison to existing BMPs implemented by members represented by the chosen monitoring sites. If source reduction and non-structural BMPs are not fully implemented within the group, appropriate source management and non-structural management practices will be implemented. If source reduction and non-structural BMPS are fully implemented or cannot be fully implemented by members within the group, structural and active or passive treatment BMPs will be explored.

A large percentage of the sites enrolled in the LAILG lease their property under a utility easement. The majority of these easements are for properties that are operated under power lines owned by SCE. All structural BMPs need prior approval by SCE. These limitations present an obstruction for growers trying to reduce potential impacts from growing practices on SCE owned land. Growers who operate on SCE owned lands will use BMPs based upon "*Best Management Practices: A Water Quality Field Guide for Growers, Southern California Edition*", prepared by the University of California Division of Agriculture and Natural Resources, and will be expected to adhere to guidelines set forth in this document.

6.1 Nutrients

Additional or upgraded BMPs will be based on Water Quality Benchmark exceedances for nutrients in the designated sampling groups. For all representative members in a group with nutrient exceedances, certified nutrient management plans will be required. Additional BMPs will be based around the BMP Questionnaire for Nutrients and Water Use (Appendix E), and will focus on nutrient use and improved irrigation efficiency.

6.2 Legacy Pesticides

Additional or upgraded BMPs will be based on Water Quality Benchmark exceedances for legacy pesticides and their derivatives in the designated sampling groups. Additional BMPs will be based around the BMP Questionnaire for Sediment and Water Use (Appendix E), and will focus on improved irrigation efficiency, erosion and runoff control measures, and filtration and/or infiltration.

6.3 Current Pesticides, Copper, and Toxicity

Additional or upgraded BMPs will be based on Water Quality Benchmark exceedances for current use pesticides, copper, and toxicity in the designated sampling groups. Additional BMPs will be based around the BMP Questionnaire for Pesticides, Sediment and Water Use (Appendix E), and will focus on improving pesticide management programs, improved irrigation efficiency, erosion and runoff control measures, and filtration and/or infiltration.

6.4 Unresponsive Members

Members who have not completed the questionnaires and are unable to be grouped will automatically be required to do all the BMPs required for each individual group. This means all BMPs required from the large group, the medium group, the small group, and the micro group will be mandatory for all non-responsive members. If requirements overlap for different groups in a BMP category, the most stringent requirement in each category will apply. This will ensure that non-responsive members will have to adhere to the most stringent BMP implementation requirements. Recommended BMPs will be based on group wide information. LAILG anticipates that this will provide additional incentives for growers to respond to questionnaire requests in a timely manner.

6.5 BMP Implementation Schedule

A schedule will be presented and implemented once sampling results indicate water quality exceedances in each individual group.

7.0 OUTREACH PLAN

The LAILG has full time personnel that are available for grower assistance via phone whenever necessary. LAILG is available to provide support, if required, to assist growers with information included in the documents. A website dedicated to the LAILG portion of the NGA is currently live and contains all relevant LAILG information for all growers that have reported data. The website has a back-end password protected system for growers to enter their data on-line in real time, which includes digital versions of the General Questionnaire and the BMP questionnaire required by the WQMP. If members submit hardcopy questionnaires. LAILG manually inputs this information into the website database.

Outreach to members is tailored to individual member requirements, including their most convenient form of communication. The best form of communication for each member is collected and recorded by LAILG. General communications are done with the website, mass emails, individual emails, phone calls, and/or mailers, depending on member requests.

Mandatory educational events will continue to be provided per Waiver requirements. The ultimate goal of the LAILG is to use more field training as continual education in order to further engage growers in the BMP implementation process. LAILG will pursue opportunities for grant money in order to pursue installations, including field training, of future BMPs.

In 2020, in-person continuing education events were postponed due to the COVID-19 outbreak. In the meantime, LAILG is preparing to launch an online portal to offer continuing education courses until in-person classes are once again permitted. These classes are pre-recorded and will include quizzes with a mandatory passing rate of 70% to receive credit. Live webinars may also be offered to members.

LAILG assists with the preparation of individual, site specific maps for each enrolled grower who provided sufficient data to locate their property. Maps include specific instructions and a legend so growers can point out key features on their property, such as: drainage ditches and stormwater discharge locations, fertilizer and pesticide storage areas, soil piles and compost areas, potting areas, quarantine areas, and structural BMPs installed at the property. Whenever LAILG staff visits a new facility, a map is completed per the standards listed above. This will allow LAILG to get a more comprehensive picture of each growing facility, standard property uses, and assist with any future sampling that may take place at sites. Example maps are included in Appendix H.

APPENDIX B

GENERAL INFORMATION QUESTIONNAIRE

General Operational Questionnaire

NGA LAILG Member Number : _____

COMPANY: _____ Facility: _____

Filled out by: _____ Title: _____

Email: _____ Phone: _____

Instructions

Please fill out one questionnaire for *EACH FACILITY* that you have enrolled.

THIS QUESTIONNAIRE IS REQUIRED TO BE COMPLETED FOR ENROLLMENT

Part I: General Company

1. What is your primary crop? Circle ONE.

Color / Bedding Plant
Orchard
Greenhouse
Retail w/Production
Vineyard
Box Tree & Shrub
Farm / Row Crop

2. What are your company yearly Gross crop sales? CIRCLE ONE.

Less than $50,000 per year
Between $50,000 and $200,000 per year
Between $200,000 and $1,000,000 per year
Between $1,000,000 and $5,000,000 per year
Over $5,000,000 per year

3. How many TOTAL IRRIGATED ACRES do you operate in the United States?

_____ Acres

For questions, contact Ariana McCray, Director of Member Relations: (805) 668-1876 or ariana@nurserygrowers.org

Part II: General Company

4. How many agricultural facilities does your company operate in the United States?

_____ Facilities

5. Do you ship out of state? Please circle below

YES NO

6. Do you move material between facilities? (Only applies if you have more than one facility)

YES NO Only Have One Facility

7. Do you ship material (either sales or intracompany transfer) north of Santa Barbara?

YES NO

8. Please review your pesticide use reports. How many applications have occurred in the previous 12 months? How many different pesticides/herbicides/fungicides were used?

_____ # Applications _____ # Different Chemicals

9. What methods do you use to apply pesticides? Please break down into percentages.

_____% Spray

_____% Drench/Sprench

_____% Other (specify below)

For questions, contact Ariana McCray, Director of Member Relations: (805) 668-1876 or ariana@nurserygrowers.org

Part III: General Fertilizer

10. **Please review your fertilizer application records and/or nutrient management plans. List all formulations (solid and liquid) applied during the previous 12 months. We will calculate total Nitrogen (N) and total Phosphorus (P) from this information. Use one line for each formulation**

If you do not wish to supply your formulations and would prefer to calculate pounds of N and P on your own, please see attached fertilizer worksheet.

Attach extra sheets if needed

	SOLID or LIQUID Formulations	N-P-K	**QTY applied** Pounds (Solid) or Gallons (Liquid)
Ex.	**solid**	**17 - 8 - 8**	**2000 lbs**
Ex.	**liquid**	**10 - 10 - 10**	**1000 gallons**
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	
		___ - ___ - ___	

11. **What methods do you use to apply fertilizer? Please break down into percentages.**

_____% Topdress

_____% Liquid Feed as Needed, Dosatron

_____% Fertigation

_____% Soil Incorporation

_____% Broadcast

For questions, contact Ariana McCray, Director of Member Relations: (805) 668-1876 or ariana@nurserygrowers.org

Part IV: General Irrigation

12. What methods of irrigation do you use? Please break down into percentages.

_____% Drip

_____% Overhead Sprinkler

_____% Hand Water

_____% Furrow

13. Please review your water use. How much water did you apply during the previous 12 months? Depending on your supply this may be in gallons, hundred cubic feet, etc...please include your unit of measurement!

We applied _____(number) _____(Unit of measurement)

14. Do you recycle water in your facility?

YES NO

15. Do you use reclaimed water?

YES NO

16. Where do you get your water? Please break down into percentages.

_____% City/Municipal/Private Water Company

_____% Off-site well

_____% Well on site

THANK YOU! RETURN THIS QUESTIONNAIRE TO NGA WITHIN 30 DAYS TO COMPLETE YOUR ENROLLMENT!

**Please keep a copy of this form for your files on-site.

For questions, contact Ariana McCray, Director of Member Relations: (805) 668-1876 or ariana@nurserygrowers.org

APPENDIX E

BMP QUESTIONNAIRE

Best Management Practices (BMPs) :
QUESTIONNAIRE LA Irrigated Lands Group*

PESTICIDES

NURSERY GROWERS ASSOCIATION

Company Name: **Facility/Yard location[!]:**

Please circle the pesticide use and storage BMPs you currently use in your facility. Circle all that apply. Indicate whether it is completed for your entire facility or the percentage of your facility you use the BMP on, and/or the amount of times a year the BMP is implemented. If you implement additional PESTICIDE related BMPs, please list at the bottom.

Best Management Practice	**Not Implemented**	**Implemented Completely** Throughout Entire Facility	How many times a year is BMP?	**Implemented Partially** Write Approximate Percentage of Facility Implementation.	**General Notes or Comments**
a) Integrated Pest Management (IPM) Program	N	Y			
b) Designated IPM Manager	N	Y			
c) Covered storage area for all pesticide materials AND equipment	N	Y			
d) Spill Kits - checked and restocked regularly	N	Y	/yr		
e) Sticky card monitoring	N	Y		%	
f) Review industry pesticides, and implement newer, less environmentally persistant chemistry	N	Y	/yr	%	
g) Manually scouting for pests	N	Y	/yr	%	
h) Manual weeding	N	Y		%	
i) Dust control	N	Y		%	
j) Spot Spraying for pests	N	Y		%	
k) Using non-chemical means for pest control. Ex. Biologicals, exclusion, etc.	N	Y		%	
l) Conduct tailgate meetings on pesticide management and emerging pests	N	Y	/yr		
m) Selecting pest resistant crop varieties	N	Y			

* This questionniare is required for enrollment in the LAILG. Please keep a copy for your records.

! This Questionnaire must be filled out for each facility/yard.

Best Management Practices (BMPs) :
QUESTIONNAIRE LA Irrigated Lands Group*

NUTRIENTS

NURSERY GROWERS ASSOCIATION

Company Name: **Facility/Yard location[!]:**

Please circle the nutrient use and storage BMPs you currently use in your facility. Circle all that apply. Indicate whether it is completed for your entire facility or the percentage of your facility you use the BMP on, and/or the amount of times a year the BMP is implemented. If you implement additional NUTRIENT related BMPs, please list at the bottom.

Best Management Practice	**Not Implemented**	**Implemented Completely** Throughout Entire Facility	How many times a year is BMP?	**Implemented Partially** Write Approximate Percentage of Facility Implementation.	**General Notes or Comments**
a) Regular Soil and Tissue sampling	N	Y	/yr	%	
b) pH and conductivity monitoring	N	Y	/yr	%	
c) Use of certified nutrient mangement plan	N	Y			
d) Irrigation Water sampling to determine its nutrient content	N	Y	/yr		
e) Covered Storage Area for your fertilizers AND application equipment	N	Y			
f) Spill Kits - checked and restocked regularly	N	Y	/yr		
g) Pulse Irrigation for liquid fertilizers	N	Y		%	
h) Controlled release fertilizers to match crop production schedules	N	Y		%	
i) Are the specific plant needs considered before applying fertilizer?	N	Y			
j) Conduct tailgate meeting on nutrient management	N	Y	/yr		

* This questionniare is required for enrollment in the LAILG. Please keep a copy for your records.

! This Questionnaire must be filled out for each facility/yard.

Best Management Practices (BMPs) : **SEDIMENT**
QUESTIONNAIRE LA Irrigated Lands Group*

NURSERY GROWERS ASSOCIATION

Company Name: **Facility/Yard location[!]:**

Please circle the sediment control BMPs you currently use in your facility. Circle all that apply. Indicate whether it is completed for your entire facility or the percentage of your facility/linear feet you use the BMP on. If you implement additional SEDIMENT CONTROL related BMPs, please list at the bottom.

Best Management Practice	**Not Implemented**	**Implemented Completely** Throughout Entire Facility	**Implemention Rate** Write Approximately how many linear feet or square feet are used.	**Implemention Rate** Write Approximate Percentage of Facility BMP treats or is implemented on.	**General Notes or Comments**
a) Gravelled roads	N	Y	ft^2		
b) Groundcover fabric in production blocks	N	Y	ft^2		
c) Filter material in drainage channels or on boundaries of property	N	Y	ft		
d) Water diversion to one pond/area for collection and reuse or natural percolation. Write area and locations of property that drains to the pond in comments	N	Y	ft^2		
e) Berms, filter materials, or tarping of soil piles, compost, and/or planting prior to rain	N	Y		%	
f) Water truck for dust control	N	Y			
g) Silt fencing and/or sand bagging	N	Y	ft		
h) Potting areas away from water drainage channels	N	Y		%	
i) Hillsides are covered or planted (not bare soil) with mulch or fabric	N	Y		%	
j) Filters/traps around exit drains from property	N	Y		%	# drains =
k) Windbreaks to prevent wind erosion	N	Y	ft		
l) Filter socks used on the property?	N	Y	ft		
m) Conduct tailgate meetings on sediment control	N	Y	/yr		

* This questionniare is required for enrollment in the LAILG. Please keep a copy for your records.

! This Questionnaire must be filled out for each facility/yard.

Best Management Practices (BMPs) :
QUESTIONNAIRE LA Irrigated Lands Group*

WATER USE

NURSERY GROWERS ASSOCIATION

Company Name: **Facility/Yard location[!]:**

Please circle the water use BMPs you currently implement at your facility. Circle all that apply. Indicate whether it is completed for your entire facility or the percentage of your facility you use the BMP on, and/or the amount of times a year the BMP is implemented. If you implement additional WATER USE related BMPs, please list at the bottom.

Best Management Practice	**Not Implemented**	**Implemented Completely** Throughout Entire Facility	How many times a year is BMP?	**Implemented Partially** Write Approximate Percentage of Facility Implementation.	**General Notes or Comments**
a) Drip irrigation	N	Y		%	
b) Soil moisture monitoring	N	Y	/yr	%	
c) Weather station use	N	Y			
d) Regular training for irrigation personnel	N	Y	/yr		
e) Irrigation equipment inspections	N	Y	/yr		
f) Shut off valves installed on hose discharge end	N	Y			
g) Group crops with similar water needs	N	Y			
h) Third party irrigation audits	N	Y	/yr		
i) Conduct tailgate meetings on water use and water quality issues	N	Y	/yr		
j) Hand watering individual containers, and percent of property	N	Y		%	

* This questionniare is required for enrollment in the LAILG. Please keep a copy for your records.

! This Questionnaire must be filled out for each facility/yard.

Best Management Practices (BMPs) : **HOUSEKEEPING**
QUESTIONNAIRE LA Irrigated Lands Group*

NURSERY GROWERS ASSOCIATION

Company Name: **Facility/Yard location[!]:**

Please circle the housekeeping BMPs you currently implement at your facility. Circle all that apply. Indicate whether it is completed for your entire facility or the percentage of your facility you use the BMP on, and/or the amount of times a year the BMP is implemented. If you implement additional HOUSEKEEPING related BMPs, please list at the bottom.

Best Management Practice	**Not Implemented**	**Implemented Completely** Throughout Entire Facility	How many times a year is BMP?	**Implemented Partially** Write Approximate Percentage of Facility Implementation.	**General Notes or Comments**
a) Regular trash collection	N	Y			
b) Covering of maintenance and storage areas prior to rain	N	Y			
c) Sweeping of paved areas on site before a rain event	N	Y			
d) Conduct tailgate meetings on housekeeping practices	N	Y	/yr		
e) Covered trash areas	N	Y			

* This questionniare is required for enrollment in the LAILG. Please keep a copy for your records.

! This Questionnaire must be filled out for each facility/yard.

APPENDIX G

MINIMUM BMP REQUIREMENTS

MINIMUM BMP REQUIREMENTS
BMP IMPLEMENTATION GUIDELINES FOR GROUPS

All Sites

A number of BMPs that have been identified in guidance documents are both inexpensive and simple to implement at growing sites. These BMPs mainly revolve around simple housekeeping, operational practices, and proper employee training. Due to their ease of use for implementation, LAILG has required that the following BMPs have been implemented at all growing sites enrolled in the LAILG:

- Irrigation Management:
  1) Train personnel to manage spray stakes and drip system to ensure all operational discharge points are located inside pots.
  2) Train all employees that apply irrigation water to maintain irrigation system properly.
- Pest Management:
  1) Avoid application of pesticides prior to forecasted rain events.
  2) Train all employees to clean up spills immediately based on predetermined protocols or spill management plan.
  3) Train all employees on the basic principles of pesticide use and spill control.
- Nutrient Management:
  1) Avoid application of fertilizer prior to forecasted rain events.
  2) Train all employees to clean up spills immediately based on predetermined protocols or spill management plan.
- Erosion and Runoff Management:
  1) Inform all employees as to the location of all drainage conduits, where they drain to, and the location of stormwater and sewer system drains.
  2) Train all employees on the basic principles of stormwater runoff management and current regulations (including the CWIL program).
- Non-Production Areas:
  1) Maintain all company vehicles to prevent leaks.
  2) Keep wash water from vehicle cleaning on property and prevent it from entering storm drains or sewer system.
  3) Train all employees to clean up spills immediately and properly from vehicles.
  4) Maintain site and keep it free from trash and debris.
  5) Keep outdoor garbage containers covered.
  6) All outhouses need to be periodically cleaned and maintained.
  7) Properly dispose of hazardous waste and oil.
  8) Train all employees to clean up prior to forecasted rain events.
  9) Regular sweeping of all paved loading and unloading areas.
